Beating odour with Yucca schidigera

Figure 1 - Time course (0-3 weeks) of group-mean odour scores for faeces and urine produced by cats fed a dry diet without (control) or with (test) a yucca preparation.

Figure 2 - Effects of various yucca preparations on odor offensiveness of feces derived from dogs (experiments 1-6) and cats (experiments 7-12). The experiment number corresponds with the order of appearance in this paper. For each experiment, the mean control value is set at 100 and the mean of test value(s) presented as fraction. Reported or calculated faecal scores were used, except for the butanol values in case of experiment 10.
